

Environmental Policy

Fortress Recycling strives to give utmost consideration to the impact our industry has on the environment and supports solutions to ensure regulatory and legal compliance as well as cost-effective management of environmental issues.

We not only ensure that all activities carried out by us comply with all relevant environmental legislation, we offset the carbon dioxide emissions of our fleet via external assessment under the Voluntary Carbon Standards.

We operate Mix Telematics analytics across our fleet of vehicles, which monitors the performance of our drivers. Drivers that meet the required standard receive a monthly bonus. This innovation has led to a significant reduction in our fuel consumption.

We are committed to the prevention of pollution: we aim to continuously improve our environmental performance through the support and involvement of all employees and any other interested parties. In recognition of this, we have implemented an environmental management system.

We aim to.

- Actively reduce waste through our resource efficiency policy, which describes our principle of preventing, re-using and recycling as much waste as possible.
- Maximise efficient use of natural resources through office best practice guidelines
- Continue to operate a purchasing policy to ensure as much material as possible is sourced from recycled material
- Reduce the amount of energy consumed during office hours by efficiently using equipment and operating our 'switch off' when not in 'use' policy
- Continue to encourage our clients, suppliers and contractors to adopt our environmental management system in their own organisation
- Review our EMS including this policy
